Rheumatoid Arthritis (RA) A disease defined by clinical criteria

At least 4 of the following criteria
should be fulfilled

- Morning stiffness > 1 hour
- Swolleness in ≥ 3 joints
- Swolleness in hand joints
- Symmetric joint involvement
- Typical joint destruction by X-ray
- Rheumatid nodules
- Presence of rheumatoid factors in serum

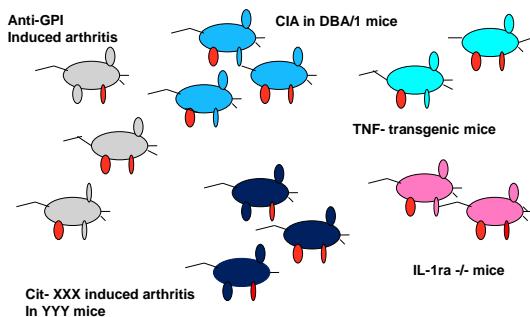

Early RA
Inflammation

Advanced RA
Destruction

The mouse lesson: Many ways of getting and many ways of curing arthritis – genes and environment are the determinants

EIRA

Epidemiologic Investigation of
Rheumatoid Arthritis

Aim: To study the interaction between
genes, environmental factors and
immunity in RA

EIRA

**A population based
case-control study**

Data collection started 1996

EIRA

Information:

- **Questionnaire:** information on environmental/lifestyle factors among cases and controls
- **Plasma, Serum/DNA:** genetic and immunologic information

Study start – 1996

- Data collection still on-going.

2015

So far we have included about 3900 cases and 6100 controls

Less than one year between disease onset and inclusion in EIRA for 85% of the cases

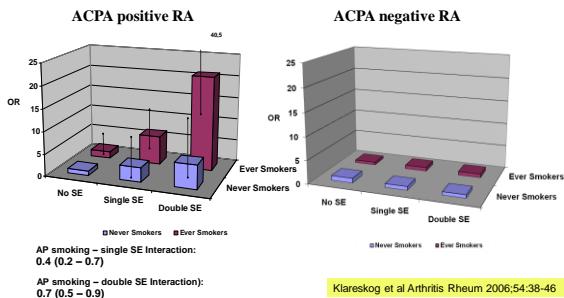

EIRA

Interaction between the two major established riskfactors:

- HLA-DRB1 shared epitope
- Smoking

Interaction between smoking and HLA-DRB1 SE in ACPA + RA and ACPA - RA .

Odds ratios for different combinations of smoking and HLA-DRB1 SE alleles regarding risk of developing ACPA positive RA and ACPA negative RA.

A hypothesis on an etiology

- Smoking causes citrullination of proteins
- An immune reaction against citrullinated proteins is triggered preferentially in individuals carrying the HLA-DRB1 SE genotype

(The same immune reaction can cause arthritis in mice)

Kvartsexponering

Andra luftvägsexponeringar också relaterade till risk för RA?

Kvarts?

- frågor angående specifika yrkesexponeringar och under vilka tidsperioder:

"Ange om du har kommit i kontakt med något av följande i ditt arbete - i så fall under vilket/vilka år"

- indexår

Kvartsexponering

Personer som rapporterat följande exponeringar före eller under indexåret:

- stenkrossning
- bergborrning
- stendamm/betongdamm

Enbart män analyserades

577 fall och 659 kontroller ingick i analysen.

Andelen silica-exposed var 14% bland fallen och 10.5% bland kontrollerna.

Odds ratio (OR) with 95% CI of developing **ACPA-positive** RA, among men exposed to stone dust, rock drilling, stone crushing and silica overall, respectively, compared with men unexposed to silica

Exposure	Number of cases/controls	OR	95% CI
Stone dust	44/58	1.60	1.04-2.44
Rock-drilling	18/17	2.34	1.17-4.68
Stone crushing	11/13	2.03	0.88-4.67
Silica overall	54/69	1.67	1.13-2.48

Odds ratio (OR) with 95% CI of developing **ACPA-negative** RA, among men exposed to stone dust, rock drilling, stone crushing and silica overall, respectively, compared with men unexposed to silica

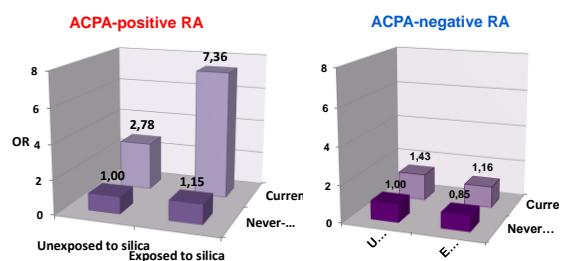

Exposure	Number of cases/controls	OR	95% CI
Stone dust	17/58	1.02	0.57-1.82
Rock-drilling	5/17	0.96	0.34-2.67
Stone crushing	5/13	1.34	0.45-3.97
Silica overall	20/69	0.98	0.57-1.66

Stolt P, et al. Ann Rheum Dis. 2010 Jun;69(6):1072-6.

Men rökning då ?

Interagerar kvartsexponering med rökning?

Odds ratio (OR) of developing RA among men with different combinations of silica exposure status and cigarette smoking

Stolt P, et al. Ann Rheum Dis. 2010 Jun;69(6):1072-6.

Diskussion

Vår studie är den största hittills och den med bäst kontroll för confounding.
Tillförlitligheten av exponeringsklassificeringen hög
Enbart samband för ACPA positiv RA

Slutsatser

Kiselexponering i kombination med rökning bland män är associerat med en förhöjd risk att utveckla ACPA-positiv RA.

Resultaten indikerar att olika luftburna exponeringar kan samverka i etiologin till ACPA-positiv RA

STRATEGIC RESEARCH

FOR RHEUMATOID ARTHRITIS

200 Years
1800 – 2010

Odds ratios were adjusted for potential confounding from age and residential area.

Adjustment for social class, joint injury and physical work load was also conducted, but only marginally changed the estimates and was not retained in the final analyses.

200 Years
1800 – 2010

Diskussion

Sambandet mellan sillika och RA observerat i 6 tidigare mindre studier.
